Endoscopy Forceps

1. Endoscopy Forceps with a jaw consisting of two jaw arms forming the tip of the instrument and a connected stress-relief spiral spring extending backwards within which the operating cable is mounted longitudinally,

characterized in that

the two jaw parts (1, 2) are mounted to pivot in a manner like scissors about a centrally-positioned axis (3), each being provided with an operating lever (4, 5) directed outward toward the circumference (U) whose ends (6, 7) are held within recesses (8, 9) of a shell (11, 12) connected with the spiral spring.
